Profile Summary

- Strong passion for developing MERN Stack projects, building and integrating Machine Learning into applications, and solving Data Structures & Algorithms (DSA) problems in C++ to enhance my problem-solving skills.
- Experienced in developing and implementing software solutions using React, MongoDB, Python, Express, and Node.js within the MVC framework also proficient in creating and integrating databases and robust APIs with both existing and new applications.
- Participated in 10+ national-level hackathons, including securing a Top 3 position at SIH 2024, Runner-Up at CodeChef's Blue Bit 2.0 Hackathon, and a Top 12 finish at IIT Bombay's LogiThon Hackathon.

Education

- **B.Tech CSE (AI&ML) GH Rasoni College of Engineering & Management Pune** July 2022 – Present
- CGPA - 8.13 Pune, Maharashtra

Experience

Web Master, IEEE GHRCEM Pune

January 2025

- Responsible for managing and updating the IEEE GHRCEM website, ensuring seamless event promotions, and maintaining web content for college-level technical activities.
- Managed technical initiatives, facilitated knowledge sharing, & strengthened industry-academia engagement within the community.

Projects

GCR - Global Catalog Registry (ONDC By Ministry of Industries) ([Link](#)) :-

February 2024

- A Centralized DataBase that Efficiently manages and organizes product catalogs from multiple sellers for seamless access and retrieval.
- Dynamic vs. Static Data Handling: Incorporate mechanisms to efficiently manage dynamic and static information.
- Interactive UI/UX with PreBuilt and Custom template, Search & Filtering providing a responsive and intuitive user interface(sellers) for smooth navigation.

Rapid Compliance Checker for Cross Border Shipments (Logistics) ([Link](#)) :-

March 2025

- Built a Rapid Compliance Checker for cross-border shipments to ensure regulatory compliance and detect anomalies.
- Developed the frontend using React, the backend with Node.js, and integrated Flask for machine learning-based compliance validation. Utilized MongoDB for efficient database management and implemented advanced data analysis for real-time decision-making. based on Category, keywords or queries.

NewsSnips - A Global News Categorization and Summarization Application ([Link](#)) :-

October 2024

- Global News Categorization: Automatically organizes articles into categories built with React.js for seamless navigation.
- Summarization: Uses advanced NLP techniques like TF-IDF and Cosine Similarity to generate concise summaries.
- Custom Search: Enables users to filter and search articles based on Category, keywords or queries.

Rail Sahayta – Integrating AI into the Existing Rail Madad ([Link](#)) :-

December 2024

- Utilized Flask to seamlessly integrate machine learning models into the application, Implementing various CNN architectures and Yolov5 for complaint categorization and implementing Mask R-CNN to assess complaint severity.
- Predicted recurring issues using the ARIMA model with historical complaint data, enhancing automation and efficiency in handling railway complaints through AI-driven solutions.

Achivements

- **Codechef's & IEEE Blue Bit 2.0 Hackathon (1st Runner Up)** February 2024
- **Smart India Hackathon 2024 (Top 3 teams under Ministry of Railway)** December 2024
- **Logithon x IIT Bombay (Top 12 teams)** March 2025

Technical Skills

- **Development** - React, Nodejs, MongoDB, Flask, Express, MVC Framework, Redux, JWT, API Development & Integration
- **Machine Learning** - CNN Architectures, NLP, Torch, Tensorflow, OpenCV, Yolo, Scikit-learn
- **Database** - MongoDB, SQL, Firebase
- **Languages** - C++, Javascript, Python, Java
- **Soft Skills** - Team Management, Leadership, Public Speaking, Communication Skill
